

1. Mixed-Content Test Page

This synthetic report is designed to test document parsing across text, raster images, charts, tables, captions, and mathematical expressions. All values are illustrative and do not describe a real experiment.

Figure 1: A synthetic graph used to test image extraction and caption association.

Equation: $h_v^{(l+1)} = \text{sigma}(w_l * \text{mean}(\{h_u^{(l)} : u \in N(v)\}))$

The diagram represents entities as nodes and relationships as edges. A parser should preserve the figure as an image, associate the nearby caption, and continue reading the surrounding paragraphs in the correct order.

2. Mixed-Content Test Page

This synthetic report is designed to test document parsing across text, raster images, charts, tables, captions, and mathematical expressions. All values are illustrative and do not describe a real experiment.

Model	Accuracy	F1	Latency (ms)
Text baseline	0.842	0.817	42
Graph baseline	0.861	0.839	55
Hybrid method	0.894	0.872	61
Ablation A	0.875	0.851	49
Ablation B	0.868	0.846	46

Table 2: Illustrative benchmark results.

The table tests row and column reconstruction, numeric alignment, and header detection. The expected output should keep each metric aligned with its corresponding model instead of flattening all cells into an ambiguous sequence.

$$F1 = 2 * \text{precision} * \text{recall} / (\text{precision} + \text{recall})$$

3. Mixed-Content Test Page

This synthetic report is designed to test document parsing across text, raster images, charts, tables, captions, and mathematical expressions. All values are illustrative and do not describe a real experiment.

Mathematical expressions

$$(1) \quad p(y=1 \mid x) = 1 / (1 + \exp(-w^T x))$$

$$(2) \quad L(\theta) = - \sum_i y_i \log(p_i) + \lambda ||\theta||_2^2$$

$$(3) \quad \text{Attention}(Q,K,V) = \text{softmax}(Q K^T / \sqrt{d_k}) V$$

$$(4) \quad \Delta_{SP} = | P(\hat{y}=1 \mid s=0) - P(\hat{y}=1 \mid s=1) |$$

$$(5) \quad x_{(t+1)} = \alpha A x_t + (1-\alpha) e_q$$

These expressions are encoded as selectable text rather than screenshots. They test whether superscript-like notation, brackets, conditional bars, matrix symbols written in ASCII, and equation numbering survive conversion to Markdown or structured JSON.

4. Mixed-Content Test Page

This synthetic report is designed to test document parsing across text, raster images, charts, tables, captions, and mathematical expressions. All values are illustrative and do not describe a real experiment.

Figure 4: A line chart with axes, legend, markers, and numeric trends.

A multimodal parser may extract the chart as an image while separately preserving the title and caption. More advanced systems may also infer the plotted series, axis labels, and approximate values.

$$\text{Relative improvement} = (0.81 - 0.72) / 0.72 = 0.125$$

5. Mixed-Content Test Page

This synthetic report is designed to test document parsing across text, raster images, charts, tables, captions, and mathematical expressions. All values are illustrative and do not describe a real experiment.

Figure 5: Synthetic raster illustration used as a general image example.

Region	Objects	Confidence
Left hill	1	0.93
Building	1	0.98
Windows	3	0.95
Sun	1	0.91

IoU = area(prediction intersect truth) / area(prediction union truth)

6. Mixed-Content Test Page

This synthetic report is designed to test document parsing across text, raster images, charts, tables, captions, and mathematical expressions. All values are illustrative and do not describe a real experiment.

Figure 6: A synthetic graph used to test image extraction and caption association.

Equation: $h_v^{(l+1)} = \text{sigma}(w_l * \text{mean}(\{h_u^{(l)} : u \in N(v)\}))$

The diagram represents entities as nodes and relationships as edges. A parser should preserve the figure as an image, associate the nearby caption, and continue reading the surrounding paragraphs in the correct order.

7. Mixed-Content Test Page

This synthetic report is designed to test document parsing across text, raster images, charts, tables, captions, and mathematical expressions. All values are illustrative and do not describe a real experiment.

Model	Accuracy	F1	Latency (ms)
Text baseline	0.842	0.817	42
Graph baseline	0.861	0.839	55
Hybrid method	0.894	0.872	61
Ablation A	0.875	0.851	49
Ablation B	0.868	0.846	46

Table 7: Illustrative benchmark results.

The table tests row and column reconstruction, numeric alignment, and header detection. The expected output should keep each metric aligned with its corresponding model instead of flattening all cells into an ambiguous sequence.

F1 = 2 * precision * recall / (precision + recall)

8. Mixed-Content Test Page

This synthetic report is designed to test document parsing across text, raster images, charts, tables, captions, and mathematical expressions. All values are illustrative and do not describe a real experiment.

Mathematical expressions

$$(1) \quad p(y=1 \mid x) = 1 / (1 + \exp(-w^T x))$$

$$(2) \quad L(\theta) = - \sum_i y_i \log(p_i) + \lambda ||\theta||_2^2$$

$$(3) \quad \text{Attention}(Q,K,V) = \text{softmax}(Q K^T / \sqrt{d_k}) V$$

$$(4) \quad \Delta_{SP} = | P(\hat{y}=1 \mid s=0) - P(\hat{y}=1 \mid s=1) |$$

$$(5) \quad x_{(t+1)} = \alpha A x_t + (1-\alpha) e_q$$

These expressions are encoded as selectable text rather than screenshots. They test whether superscript-like notation, brackets, conditional bars, matrix symbols written in ASCII, and equation numbering survive conversion to Markdown or structured JSON.

9. Mixed-Content Test Page

This synthetic report is designed to test document parsing across text, raster images, charts, tables, captions, and mathematical expressions. All values are illustrative and do not describe a real experiment.

Figure 9: A line chart with axes, legend, markers, and numeric trends.

A multimodal parser may extract the chart as an image while separately preserving the title and caption. More advanced systems may also infer the plotted series, axis labels, and approximate values.

$$\text{Relative improvement} = (0.81 - 0.72) / 0.72 = 0.125$$

10. Mixed-Content Test Page

This synthetic report is designed to test document parsing across text, raster images, charts, tables, captions, and mathematical expressions. All values are illustrative and do not describe a real experiment.

Figure 10: Synthetic raster illustration used as a general image example.

Region	Objects	Confidence
Left hill	1	0.93
Building	1	0.98
Windows	3	0.95
Sun	1	0.91

IoU = $\text{area}(\text{prediction} \cap \text{truth}) / \text{area}(\text{prediction} \cup \text{truth})$
